

(A) Setting 2: Delphi

Ordinal-token stream

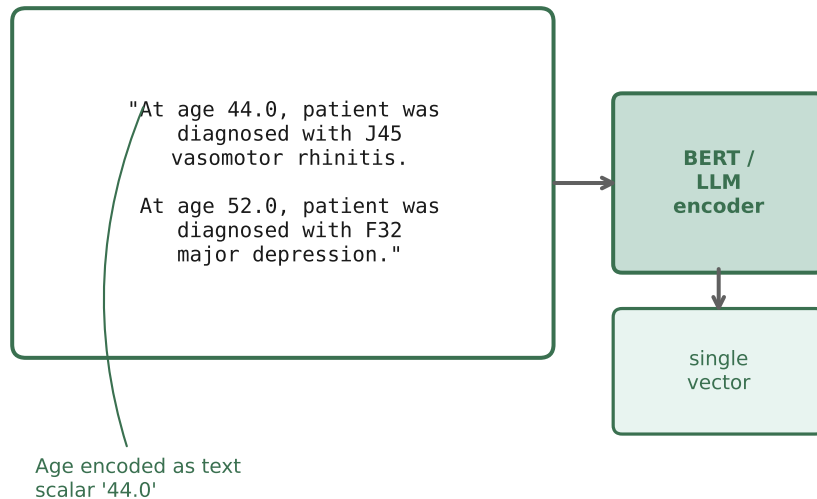

Age fused into token embedding (additive sinusoidal)

*Ordering preserved;
exact inter-event duration implicit*

(B) Setting 3/5: Prose

Text serialisation

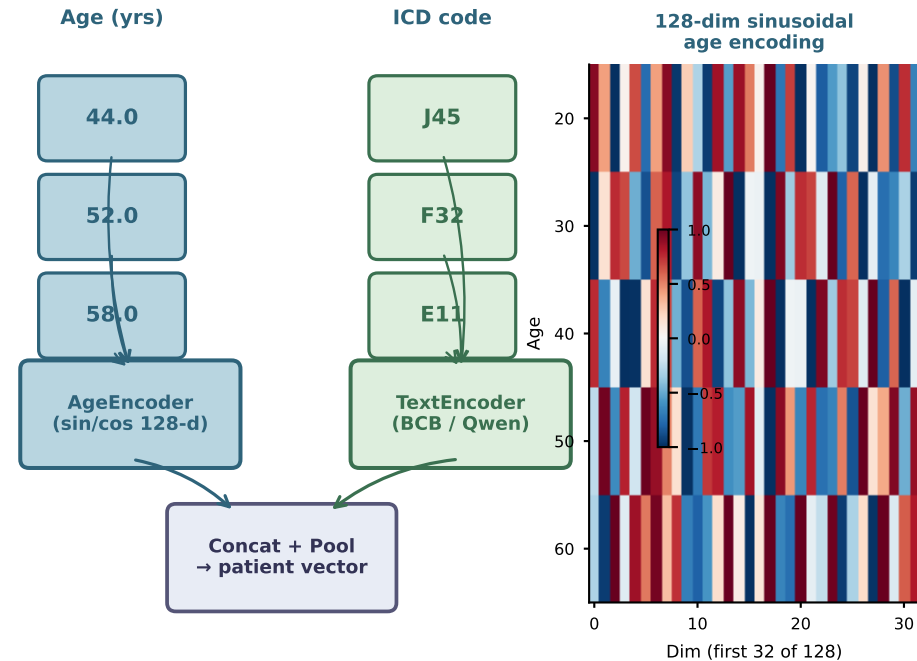

Age encoded as text scalar '44.0'

Temporal interval invisible to attention

(C) Setting 4: Trajectory

Decoupled age + event

*Explicit geometric separation:
age 44 vs 52 = ± 0.008 rad/yr different*
